Schultz Model SA Semi-Automatic Rewinders from Elsner are low volume machines known to provide efficient conversion of most light and medium weight materials for the economy-

minded converter. You can depend on traditional Elsner quality, reliability, and service – including a full supply of parts in a large, ready inventory!

Perfect for the low-volume roll converter

SCHULTZ MODEL SA SEMI-AUTOMATIC REWINDER

Now built and backed by Elsner!

Paper, foils, plastics, core or coreless, the Schultz Model SA will roll them all. This semi-automatic rewinder handles a wide range of material efficiently and economically.

The entire operation is easy. A parent roll is placed on the unwind stand and the web is threaded. Roll length is quickly dialed in on the Electric Counter. Slip a core over the winding mandrel and push dual safety buttons to start the machine. The turret indexes automatically while winding a roll and stopping at the preset length. The finished roll is removed and a new core is loaded during winding.

Web cutting takes place during turret index. Production rate depends on operator dexterity and length of roll. Wind up a good deal. Contact us with your requirements for literature.
