

Special Notice to Elsner V-4 Series Rewinder Owners. Upgrade your machine to V-5 performance at half the cost!

Upgrade your Elsner V-4 Series Rewinder to the new V-5 Series for increased speed, increased performance, increased bottom line. Special upgrade retrofit packages are now available for most older V-4-30 Elsner rewinders built after 1973.

Here are just some of the benefits of an Elsner factory upgrade:

- Complete machine disassembly and inspection by Elsner factory personnel.
- Relay logic replaced with PLC controls and touch screen operator interface with integral machine diagnostics.
- Servo motor control added to main cam shaft and cone drive.
- Machine speed increased to 600 feet (183 m) per minute.
- All new electrical cabinet and machine wiring.
- Add safety guarding package with lock-out/tag-out.

And those are just some of the benefits of upgrading your V-4 to V-5 capabilities, all at less than half the cost of a new machine.

And More...

We can upgrade any V-4 Series Rewinder built after 1973 to V-5 Series performance. Maximum speed increases to 600 feet (183m) per minute on V-4-30 Rewinders and to 500 feet (152 m) per minute on V-4-36 and V-4-42 Rewinders. In addition to the benefits already mentioned, we will replace machine limit switches with updated photo-eyes and sensors where applicable, replace 110 VAC control voltage with 24VDC

control voltage and completely test the machine in our factory. Other worn parts not normally part of the retrofit kit will also be replaced at normal list prices.

Supply us your machine serial number and we can provide a quote to upgrade your machine to today's performance standards.
