RETURN OF NEWS BULLETIN FROM ELSNER

This newsletter serves as the first edition of the return of our 'News from Elsner' bulletin. After 77 years of designing and building machinery, it is a challenge to maintain promotion and proper exposure of our entire list of offerings. As customer needs and demands change over time, our marketing emphasis changes accordingly. Features and options that have long been in use and available on Elsner machinery become less "visible", but remain an active piece of our business. We intend to use this format to keep our customers better informed of Elsner Engineering Works, Inc. offerings.

EMBOSSSED ALUMINUM FOIL

Elsner aluminum foil rewinders have had the option for an embossing (or micro-embossing) system for over 40 years. Now, many new Elsner Model AFR Fully-Automatic foil rewinders are factory equipped with our embossing option. Additionally, the Elsner **AFR-series embossing option is 'field-retrofittable'** and several customers have followed this path. Consult Elsner for further details and/or pricing to upgrade your existing equipment.

The Elsner Model AFR series of machines is designed to produce household rolled products such as food film, baking papers and aluminum foil all on the same machine. The AFR is capable of speeds up to 3000 feet per minute (915 meters per minute) or 48 rolls per minute. Its ease of operation and maintenance make it a popular choice by industry leaders. Other available machine features include glue or tape roll closure, 'tail finder' for film products and integration with downstream packaging equipment.

Please let us know if someone else in your organization would like to receive future editions of this bulletin.

Would this upgrade increase your versatility and profitability?
